

ADVANCING SCIENCE. SERVING SOCIETY

SCIENCE AND HUMAN RIGHTS PROGRAM

Dear Colleagues,

We are delighted to introduce to you "On-call" Scientists, a new project of the AAAS Science and Human Rights Program, and to encourage your participation in this initiative.

"On-call" Scientists connects scientists interested in volunteering their skills and knowledge with human rights organizations, national human rights institutions, and United Nations field offices throughout the world that are in need of scientific expertise.

From behavioral, life, physical and social scientists, to engineers, technicians, medical professionals, and public health practitioners, scientists have much to contribute to the important work being undertaken to protect and advance human rights. Whether you are able to offer a few hours of your time, or you are available for a year-long stay on-site, every contribution is valuable.

We encourage you to join "On-call" Scientists and help expand *pro bono* science in the service of human rights at home and around the world.

If you have any questions, please contact us at oncall@aaas.org.

Yours sincerely,

Mona Younis, PhD
Director, AAAS Science and Human Rights Program
